HOW DOES AGILE WORK?

octopusenergy

Smart meters allow customers' electricity use to be calculated and billed in half hour periods, and see the half hourly prices of electricity as it changes throughout the day. Agile's half-hourly prices reflect the real price of electricity that Octopus buys a day ahead, this is made up of the wholesale costs and extra charges for use of the grid.

MasterTherm and Homely customers are able to check the energy prices for the following day online and through the Octopus app at 4:30pm every day. This allows them to see the lowest cost windows the next day. As there is always a peak in demand and cost between 4pm and 7pm, MasterTherm avoids running the heat pump to avoid high cost electricity.

Agile Octopus includes Price Cap Protect, which ensures you'll never pay more than 35p / kWh for your electricity, guaranteed. Even if you continue to use your electricity as normal, you'd still save money compared with tariffs from the big 6 energy providers.

"The average Agile customer would save £188 per year compared to legacy standard variable tariffs, and £45 per year compared with Octopus Energy's 12 month fixed tariff" Octopus Energy Research Report 2020

WHAT OUR CUSTOMERS ARE SAYING....

"My system with Octopus Agile and Homely is up and running and has reduced my electricity consumption from £6 a day to £4. Very happy!"

Anthony Phillips, MasterTherm Customer

HOW DOES IT WORK WITH MY HEAT PUMP?

Connecting your MasterTherm heat pump to Homely enables you to take advantage of the Octopus Agile tariff. The innovative system will learn how long your house takes to heat up and cool down. It then looks at weather forecasts and electricity prices to make sure your house is heated at the cheapest times throughout the day to meet your desired temperatures. All you have to do is download the Homely App, set your temperature preferences just once, and that's it. Your heat pump will be operating as cheaply as possible using cutting edge technology, fair electricity pricing and fully renewable energy.

GETTING SET UP - 3 SIMPLE STEPS

1. Visit Octopus Energy and apply for an account. You can use our [referral link](#) which will qualify you for £50 credit.
2. Once set up with Octopus, you'll need to purchase the [Homely set up package](#) which is £25.
3. Homely will be able to remotely connect to your MasterTherm heat pump and set up your connection to Octopus Agile.

HAVE A QUESTION ABOUT SWITCHING?

Get in touch, we're always happy to help.
We're open Monday to Friday 8am - 5pm
